

In the Specification

Please amend the Specification as shown below. Applicant respectfully submits that the proposed amendments are being provided to correct various informalities in the Specification, and that no new matter is being added.

Please replace paragraph [0010] with new paragraph [0010] as shown below.

What is needed is a system and method for providing application programs access to extension features of third-party resource adapters in addition to allowing the application server to ~~monitoring~~ monitor the activities between the application programs and resource adapters. It would be desirable to provide the full access to the vendor object to the application programs as well as intercept calls made to an returned from the vendor object to handle server side tasks, global transaction enlistment, connection pooling, statement caching, tracing and profiling.
